PROFESSIONAL SUMMARY

Junior Software Engineer focused on backend development, with hands-on experience building and testing applications that solve real-world problems. A fast learner who adapts quickly to new technologies, enjoys problem-solving, and is committed to delivering reliable, maintainable software.

EDUCATION

Bachelor of Science in Computer Science | Qassim University Jun 2026

Python & Django Web Development Bootcamp | Tuwaiq Academy | 300 Hours 2026

Completed an intensive 300-hour bootcamp in Python and Django web development, covering databases, REST APIs, authentication, and version control. Built six practical projects, including a capstone project.

EXPERIENCE

AI & Robotics Engineering Intern | Smart Methods Jun 2025 – Aug 2025

- Trained and evaluated an image-classification model using TensorFlow and Keras, and integrated it into a Python inference pipeline for real-time predictions.

SELECTED PROJECTS

MIYAR | AI-Powered Employee Performance Management Platform

Developed a full-stack platform that automates task-based employee performance evaluations and scoring. Trained two machine learning models to predict performance scores and detect rating discrepancies, integrating LLM-generated feedback and employee recommendations. Implemented JWT authentication, role-based access control, and 71 automated tests.

Tech Stack: *Python*, *Django REST Framework*, *TypeScript*, *scikit-learn*, *pandas*, *Groq API (Llama 3.1)*, *JWT*, *Docker*, *SQLite*

AWAN | Multi-Branch Compliance Management Platform

Developed a Django web platform that helps Saudi businesses manage regulatory documents and monitor compliance readiness across multiple branches. Automated readiness calculations, renewal task assignments, and document history tracking with role-based access control. Implemented 164 automated tests to verify system functionality.

Tech Stack: *Python*, *Django*, *SQLite*, *HTML/CSS*, *XlsxWriter*, *Django Testing Framework*, *PythonAnywhere*

MASAR | School Management System

Transformed a Python OOP console application into a Django web platform by reusing existing classes and business logic. Developed student, teacher, course, and enrollment management with automated ID generation, synchronized relationships, and safe deletion workflows. Built a dynamic dashboard displaying school statistics.

Tech Stack: *Python*, *Django*, *OOP*, *JSON*, *JavaScript*, *HTML/CSS*, *UML*, *PythonAnywhere*

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, SQL
- **Backend Development:** Django, Django REST Framework, RESTful APIs, OOP, JWT Authentication
- **Frontend:** HTML, CSS
- **Databases:** SQLite
- **Tools & Practices:** Git, GitHub, Docker, PythonAnywhere, Automated Testing (Django Test Framework)
- **Machine Learning:** scikit-learn, pandas, LLM API integration (Groq)

LANGUAGES

Arabic: Native | **English:** Professional Working Proficiency
